BUILDING MANAGEMENT

MONITORING OF HVAC SYSTEMS PROTECTS
CRITICAL INFRASTRUCTURE FROM CYBER ATTACK

Challenge: The critical infrastructure (pumps, heaters, chillers) of a national data center required online monitoring and anomaly detection capabilities.

Solution: SigaPlatform was connected to the mission-critical sensors of the end devices and learned the normal operating pattern of the data center and the smart building.

Result: The system provides an exclusive indication of the building management system, end devices and processes with no false alarms.
